

India and Brazil - Amit Bhaduri

De Luiz Carlos Bresser-Pereira, 2.02.2011

Dear Bhaduri,

Wonderful article. But look that in the case of India there is economic development. Thus, despite enormous increase in inequality (which is endemic in the capitalist revolutions), standards of living of the poor starts to rise. India is in some way able to define its own interests in relation to imperialism. The high and middle minority is able promote growth. The working class and the poor will have to fight for their own interests, but they will not do it in a stagnated economic environment, as it is the case of many small and poor countries.

In you don't mind, I would like to post your article in my website, www.bresserpereira.org.br.

Warm regards,

Luiz Carlos

Dear Bresser,

I would be happy to have this article on your website. But more importantly, we need to discuss dispassionately next time we meet what 'capitalist development' means in the present context, not as an idea but in our day to day experience and its relation to democracy. I have done a piece on this for Rosa Luxemburg Foundation in Germany (unfortunately available only in German, but would soon be available in English), and would love to discuss its relevanc/irrelevance with you when we meet next.

With good wishes,

Amit

Dear Bhaduri

We need really a good conversation on the subect. In a few days, the 15-16 August, we will be inviting you for a workshop. I hope you will be able to attend.

Warm regards.

Luiz Carlos
